Hiring Manager PING Phoenix, AZ

Dear Hiring Manager,

I am excited to apply for the Summer 2026 Engineering Internship with PING's Hard Goods Product Development team. As both a mechanical engineering student at Oregon State University and an avid golfer, the opportunity to contribute to the innovation and design of PING clubs would be a dream come true. With my technical knowledge from three years of engineering coursework; combined with my firsthand experience from earlier internships, I'm confident I can make meaningful contributions to your team.

Through my internship at Power Engineers, I gained valuable experience working with 3D CAD software and collaborating across engineering and drafting teams. I worked through CAD to improve both new and old-line designs, as well as documenting all changes using Bluebeam, and logging new revisions into Bently Project Wise.

I'm particularly interested in the design and testing aspects of club development. My academic focus on the Design & Manufacturing pathway at OSU, combined with ability in SolidWorks and Siemens NX, has prepared me to jump into CAD work and contribute to the product development process from day one.

What I hope to gain from this internship is authentic experience bringing engineered products from concept into manufactured products. I want to understand how PING tests their designed products, and how these tests help decide what to change on design revisions. I'm also eager to learn from PING's engineers who are leaders in the golf equipment industry and to contribute my critical thinking skills to projects that have a tangible impact on the game I love.

I've included my resume which displays my technical skills and experience. My family is from Phoenix so relocation to this on-site job would be no issue at all. I'd welcome the chance to discuss how I can contribute to PING's mission of helping golfers play their best. Please feel free to contact me at M.brady2214@gmail.com or 503-979-1369.

Sincerely,

A handwritten signature in black ink that reads "Matthew Brady". The signature is fluid and cursive, with the first name "Matthew" being more prominent than the last name "Brady".
